Inmediata’s SecureEMR solution is a Web-based Electronic Medical Record built with an integrated billing system to capture patient and provider intake. Each patient encounter provides detail that can be used to bill the insurance company using an intelligent workflow, and the ability to easily exchange key patient data with other care sites. The system also includes an eRX where prescriptions can be provided directly to a pharmacy or can be faxed directly from the application to pharmacies.

- **Order Entry** - SecureEMR includes computerized physician order entry (aka CPOE), which allows providers to enter, store, and transmit orders. The orders include diagnostic testing, prescriptions, and lab work. The system checks for errors and transmits orders electronically which eliminates a manual process.

- **Clinical Interoperability** - SecureEMR enables the transfer and receipt Health Level 7 (“HL7”) CDA v1& v2 and ADT A01 to A60, ORM - ORU, and lab results data to and from third parties using industry best practices for exchanging data. Direct messaging between SecureEMR users can also be leveraged to send CCDA files.

- **Scheduling** - SecureEMR calendar based patient appointment scheduling, enables you to streamline your clinic’s workflow, establish multi-booking rules, and integrated Eligibility checking.

- **Patient Portal** - The patient portal in SecureEMR is provided as a no cost solution for patients. The solution offers patients 24-hour access to their personal medical information, results, services and messages from their medical care team. Provides patient controlled direct messaging to-and-from multiple healthcare providers.

- **Charting / Patient Records** - SecureEMR allows physicians to digitally create and store copies of the patients’ chart including all clinical documentation and testing. The optimal workflow involves the physician documenting in the chart near or at the time of the treatment of the patient. Being able to complete documentation at the time of treatment reduces stress, saves time, and improves accuracy of the chart.

**LESS PAPERWORK FEWER STORAGE ISSUES**
Clinicians and staff can spend a large portion of the workday filling out and processing forms. Because they are paperless, SecureEMR streamlines several routine tasks. As the amount of paperwork decreases, the required storage space within the physical office also declines. Freeing up space and saving the organization money.

**INCREASE QUALITY OF CARE**
SecureEMR provides the ability to exchange health information about a patient in real time. Accurate, up-to-date and thorough information naturally leads to a higher quality of care, from better diagnoses to a more informed care plan for the patient.

**EFFICIENCY AND PRODUCTIVITY**
SecureEMR will allow your organization to increase productivity and efficiency by eliminating paper records and facilitating centralized chart management. SecureEMR has the capability to report clinical and demographic data by running queries using pre-defined and custom conditions.

**Reduces cost through decreased paperwork, reduced duplication of testing, and improved health.**

To schedule a demonstration of EMR visit www.inmediata.com/emr or call us at 787-783-3233
**Decision Support** - SecureEMR electronically checks for drug, allergy and food interactions. It also posts alerts and can search for alternative treatments based on known interactions. In addition, it automatically reminds medical service providers to perform certain clinical quality measures related each patient. This includes standard measures as well as those specific to certain comorbidities and prescription medications which are designed to improve the standard of care for each patient.

---

Our electronic medical record (EMR) system has the potential to transform the health care system from a mostly paper-based industry to one that utilizes clinical information to assist providers in delivering higher quality of care to their patients. In addition, the ability to exchange health information electronically can help physicians to improve communication of care plan updates and testing results throughout their organization and with the larger market.
